RELEASED

Examination requested by: Addressee

Reference: Letter dated November 15, 1983

Examination requested: Firearms

Specimens:

K25 .22 Long Rifle caliber Colt pistol, Model Match Target,
Serial Number 014372S, with magazine

K26 .22 Long Rifle caliber Colt pistol, Model Woodsman,
Serial Number 131681, with magazine and holster

ALSO SUBMITTED:

Ten cartridges removed from K26 magazine in Laboratory

RESUBMITTED FROM LABORATORY NUMBER 80626057 S MC TH MU PU:

Q9-Q10 Cartridge cases (86, 89)

Q23 Bullet from right front floor (48)

Page 1

(over)

This examination has been made with the understanding that the evidence is connected with an official investigation of a criminal matter and that the Laboratory report will be used for official purposes only, related to the investigation or a subsequent criminal prosecution. Authorization cannot be granted for the use of the Laboratory report in connection with a civil proceeding.

JAN 4 1984

FBI/DOJ

Q29 Bullet from right front sub floor (50)

Q39-Q44 Bullets A through F (41 - 46)

Result of examination:

This report supplements and confirms the results of the Laboratory examinations telephonically furnished to [redacted] on December 9, 1983.

b6
b7c

Test specimens from the K25 and K26 pistols were compared with the resubmitted specimens. The firing pin impressions in the Q9 and Q10A through Q10I cartridge cases could not have been produced by the firing pin of the K25 or K26 pistols.

The rifling characteristics of the barrel or barrels from which the Q28 and Q29 bullets were fired are different from the rifling characteristics of the barrel of the K25 and K26 pistols. Therefore, specimens Q28 and Q29 were not fired from K25 or K26.

The widths of the land and groove impressions measured in specimens Q39 through Q44 are different from the widths of the land and groove impressions produced by K26. Therefore, specimens Q39 through Q44 were not fired from K26. The barrel of the K25 pistol exhibits rifling characteristics consistent with those measured in specimens Q39 through Q44. However, the individual microscopic marks of value present in specimens Q39 through Q44 could not be reproduced in test specimens fired from K25. Therefore, no conclusion could be reached as to whether these specimens were fired from K25.

Specimens Q9, Q10, Q28, Q29, Q39 through Q44, K25, K26 and the ALSO SUBMITTED cartridges are being returned to your department under separate cover by air freight.

Letter dated December 14, 1983

Examination requested:

Firearms

Specimen:

RESUBMITTED FROM LABORATORY NUMBER 80626057 S MC TH MU RV.

Q30 Cartridge case from right rear floor (60)

Result of examination:

The firing pin impression in the Q30 cartridge case was microscopically compared with the firing pin impressions produced by the K25 and K26 pistols which were previously submitted in this case. It was determined that Q30 was not fired by K25 or K26.

Specimen Q30 is being returned to your department under separate cover by registered mail.

Q308 Three cartridge cases and thirteen bullets (89)
Q309 Die set for .223 caliber (90)
Q310-Q311 Cartridge case and cartridge (91)
Q312 Fourteen cartridges in plastic bag (107)
Q313 Nine cartridges (107)
Q314 Four cartridges (107)
Q315 Cartridge (107)
Q316 Seventy-one cartridges (107)

Q317-Q335 Nineteen cartridge cases (107)

Q336 Forty-five cartridges with three magazines and two stripper clips (107)

Q337 One hundred twenty unprimed cartridge cases with seven boxes (107)

Q338 Ninety-six cartridges with five boxes (107)

Q339 Sixteen cartridges with plastic bag (125)

Result of examination:

.223 REMINGTON CALIBER CARTRIDGES AND COMPONENTS

As previously reported, the Q1 cartridge case recovered near the body of PAULA GOULDING (31011006 S PR) and the Q4 cartridge case recovered near the body of SHERRY MORROW (20927107 S PR) were identified as having been fired in the K9 Ruger rifle.

Specimens Q258 through Q264 are .223 Remington caliber cartridge cases which were also identified as having been fired in the K9 rifle. The Q260 cartridge case bears a headstamp which indicates it was manufactured by Winchester-Western. The other cartridge cases bear Government arsenal headstamps.

Present in specimens Q295, Q299, Q300, Q305 and Q317 through Q335 are five hundred thirty-five .223 Remington caliber cartridge cases. Specimen Q337 contains one hundred twenty unprimed .223 Remington caliber cartridge cases. These specimens bear commercial manufacturer and Government arsenal headstamps. No attempt was made to associate mechanism marks present on these specimens with the K9 rifle.

Present in specimens Q265 through Q294, Q296, Q298, Q313, Q316, Q336, Q338 and Q339 are .223 Remington caliber cartridges which have been reloaded with "jacketed soft point", "full metal case" and "jacketed hollow point" bullets. These specimens bear commercial manufacturer and Government arsenal headstamps.

7mm THOMPSON/CENTER - UGALDE CARTRIDGES AND COMPONENTS

Present in specimens Q297, Q301, Q304, Q306, Q307, Q311 and Q312 are 7mm Thompson/Center-Ugalde cartridges.

These are .223 Remington caliber cartridges which have been "necked up" and reloaded with 7mm bullets. Two of the Q312 cartridges were test fired in the Laboratory.

Specimens Q308 and Q310 contain .223 Remington caliber cartridge cases which have had their mouths "necked up" for loading 7mm bullets (7mm Thompson/Center-Ugaldé cartridge cases). Nine unfired 7mm (.284 caliber) bullets are present in specimen Q308.

Specimen Q303 and one of the Q310 cartridge cases have unfired primers. The two fired cartridge cases in specimen Q310 were identified as having been fired in the K10 Thompson Center Arms pistol.

Specimens Q302 and Q303 are mutilated 7mm (.284 caliber) bullets which have been fired from a barrel(s) rifled with six grooves, right twist. The rifling impressions present in the Q302 and Q303 bullets are of the same number, widths and direction of twist as those produced by the K10 Thompson Center Arms pistol, thus indicating specimens Q302 and Q303 could have been fired from the K10 pistol. However, the Q302 and Q303 bullets lack sufficient individual microscopic marks (striations) of value for identification purposes. Therefore, no conclusion could be reached as to whether or not these two bullets were fired from the K10 pistol to the exclusion of all other similarly rifled 7mm (.284 caliber) weapons.

.17 REMINGTON CALIBER CARTRIDGES

Present in specimens Q296 and Q314 are twenty-six .17 Remington caliber cartridges which have been reloaded with "jacketed hollow point" bullets. It is noted that no .17 Remington caliber firearms have been submitted to the Laboratory in this case.

.357 MAGNUM CALIBER CARTRIDGE CASE

Specimen Q315 is a .357 Magnum caliber cartridge of Winchester-Western manufacture. No .357 Magnum caliber firearms have been submitted to the Laboratory in this case.

FIREARMS

The K9 and K10 firearms functioned normally when test fired in the Laboratory. Test-fired bullets and cartridge cases have been placed in the Laboratory's Reference Fired Specimens File where they will be available for future comparison purposes.

MAGAZINES AND RELOADING EQUIPMENT

Specimens Q294 and Q336 contain .223 Remington caliber magazines of the type used in Ruger "Mini-14" rifles, such as specimen K9. Two .223 Remington caliber stripper clips are also present in specimen Q336.

Specimen Q309 contains a sizer, seater and shell holder of the type used in reloading .223 Remington caliber cartridges.

DISPOSITION OF SPECIMENS

All of the submitted specimens are being returned to the Alaska State Troopers Crime Laboratory, 5700 East Tudor Road, Anchorage, Alaska 99510 under separate cover by air express.

SUSPECT: ROBERT C. HANSEN

Dear Sir:

The evidence being herewith transmitted has not, nor will be subjected to the same type of technical examination requested. The results of your examination will be solely for the investigation and subsequent prosecution of a criminal matter.

Evidence concerning this matter, as well as a synopsis, has been submitted previously.

~~REC-ECG~~

Pursuant to our telephone conversation with the above agent, the following evidence concerning firearms examination is requested.

Item #1 (I82-12261), Item #5 (I83-65755) and Items #105, 106, and 122 (I83-65851) are presently with the F.B.I. Laboratory, File #95-251541; and several items are being sent by Federal Express to the F.B.I. Laboratory, our case numbers I83-65851, I83-65856, and I83-65858.

EVIDENCE TO BE EXAMINED:

- AST ITEM #19 (I83-65851) Orange bag with .223 ammunition, a box of 17 Remington ammunition, a pink surveyor's tape, taken from the bottom shelf of the hidden wall in the downstairs family room.
- AST ITEM #26 (I83-65851) Miscellaneous .223 ammunition from the hidden compartment in the downstairs family room.
- AST ITEM #88 (I83-65851) Two (2) sacks of .223 brass and miscellaneous live rounds taken from the top of the loading bench in the garage.
- AST ITEM #89 (I83-65851) Miscellaneous live .223 ammunition taken from the loading bench in the garage.
- AST ITEM #90 (I83-65851) RCBS .223 die set taken from loading bench in the garage.
- AST ITEM #91 (I83-65851) One (1) expended and one (1) unexpended .223 round taken from the reloading cabinet, third drawer down.
- AST ITEM #107 (I83-65851) Miscellaneous .223 ammunition and three (3) clips taken from the northeast corner of the attic.
- AST ITEM #125 (I83-65851) Plastic bag of .223 ammunition (possibly reloaded) found right next to the Mini-14 that was located in the attic.
- AST ITEM #12 (I83-65856) One (1) Mini-14 clip with live rounds taken from a red bucket in the center portion of the floor in the front seat of the pick up.
- AST ITEM #15 (I83-65858) .223 shell casing found in cardboard box in the trunk of Hansen's Buick.

EXAMINATIONS REQUESTED:

1. Compare and find any similarities in the previously (excluding the items from [redacted]) and presently submitted fired and unfired shell casings to the shell casings found at the crime scene of Sherry Morrow and Paula Goulding. b6 b7C
2. Compare previously (excluding items for [redacted]) and presently submitted fired and unfired .223 cartridges to determine whether they could have originated from the submitted .223 die found in Hansen's residence. b6 b7C
3. Compare previously (excluding items for [redacted]) and presently submitted fired and unfired .223 casings/shells to determine whether they had been loaded into and/or fired in the Mini-14 previously submitted. b6 b7C

Please feel free to perform any other examinations, which you believe would be helpful in this case.

We will followup the above requests with a phone call to Agent [redacted]

At the conclusion of your examination, please return the evidence to:

ALASKA STATE TROOPERS
5700 East Tudor Road
Anchorage, Alaska 99510

ATTN: Crime Lab

Thank you for your assistance in this matter. Please be assured of our cooperation in matters of mutual concern.

RUGER MINI-14

Data: Ruger Mini-14

Origin: United States

Manufacturer: Sturm, Ruger & Company
Southport, Connecticut

Cartridge: 223 Remington (5.56mm)

Magazine capacity: 5 rounds

Over-all length: 37¼ inches

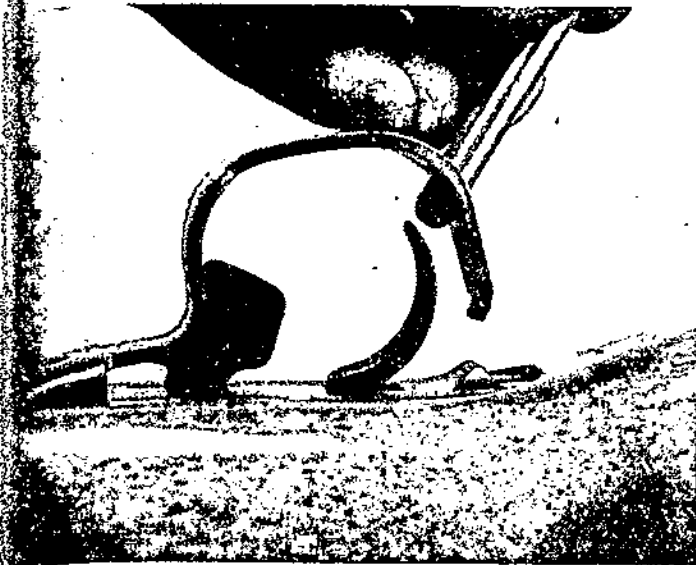

Barrel length: 18½ inches

Weight: 6.4 pounds

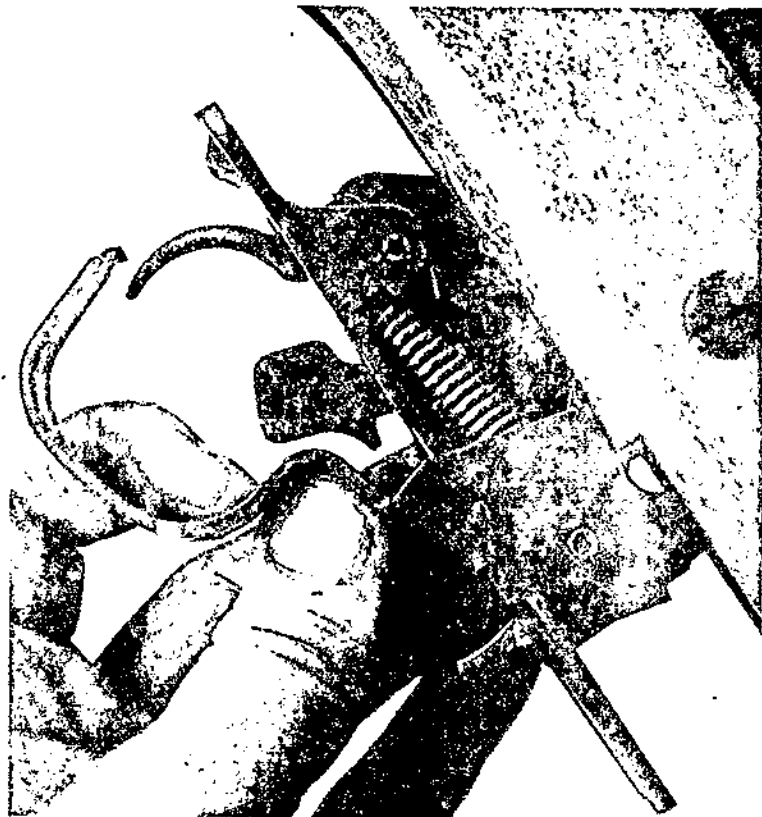

While externally it may appear to be a miniature of the U.S. M-14 rifle, the Mini-14 is all Ruger on the inside. Introduced in 1973, this neat little carbine has gained wide acceptance both as a sporting gun and in police and guard applications. There has been one small change in the original design—a bolt hold-open button was added on the top left side of the receiver, and all guns of more recent manufacture will have this feature.

Disassembly:

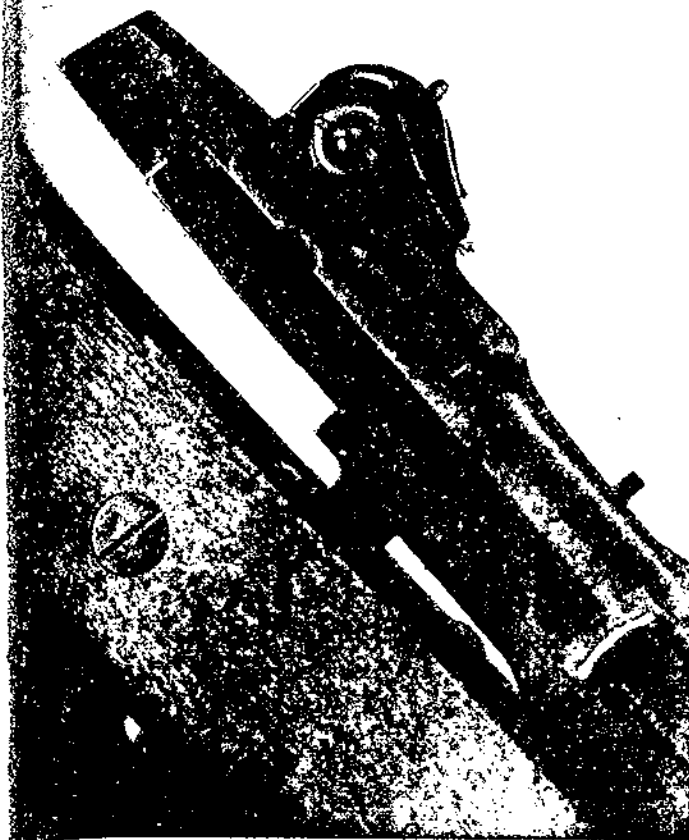

1. Remove the magazine, and cycle the action to cock the internal hammer. Push the safety back to the on-safe position, and insert a non-marring tool through the hole at the rear of the trigger guard to spring the guard downward at the rear. Swing the guard toward the front until it stops.

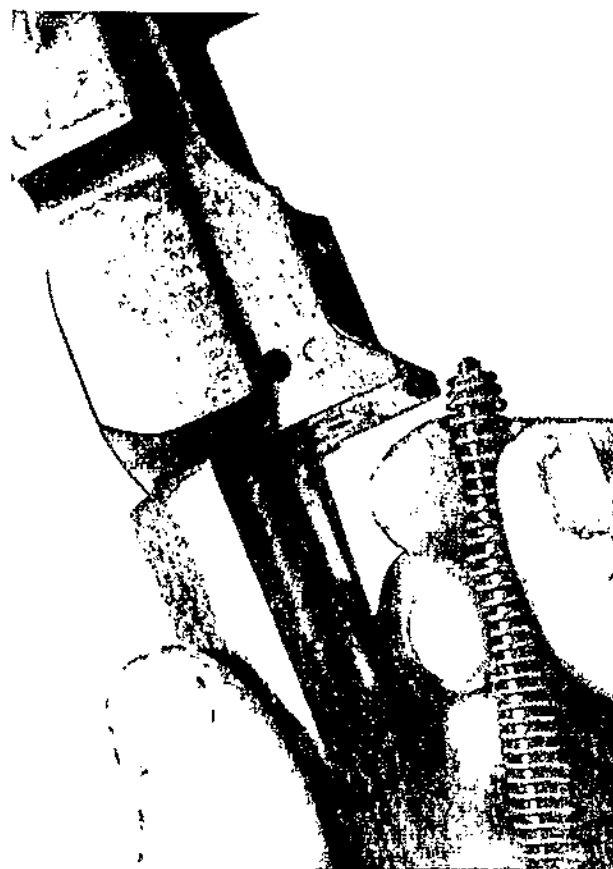

2. Remove the trigger housing downward.

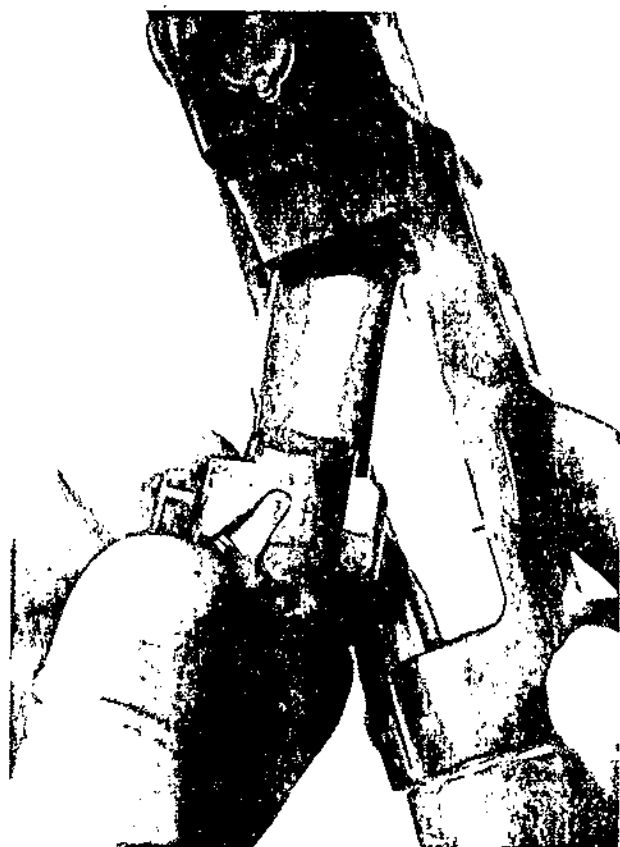

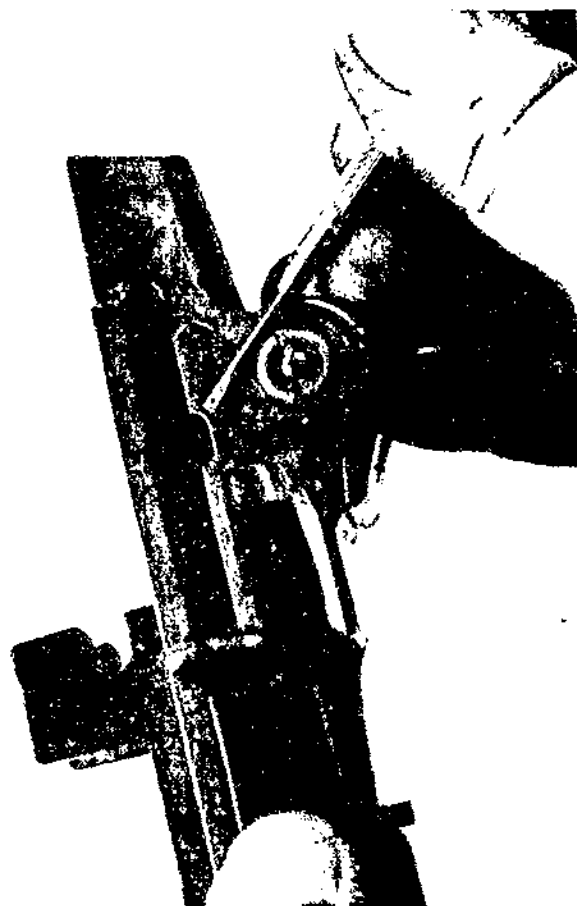

3. Tip the rear of the action upward out of the stock, and remove it toward the front.

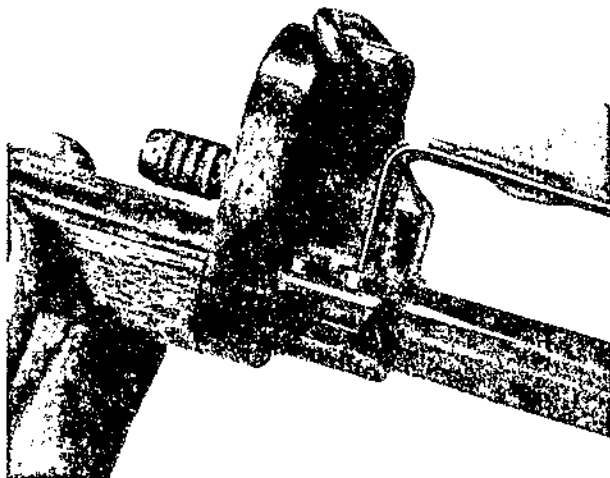

4. Grasp the recoil spring firmly at the rear, where it joins the receiver, and lift the tip of the guide out of its hole in the front of the receiver. *Caution: This is a strong spring, so keep it under control.* Tilt the spring and guide upward, slowly release the tension, and remove the spring and guide toward the rear.

5. Move the slide assembly toward the rear until its rear lug aligns with the exit cut in the slide track, and move the operating handle upward and toward the right. Remove the slide assembly.

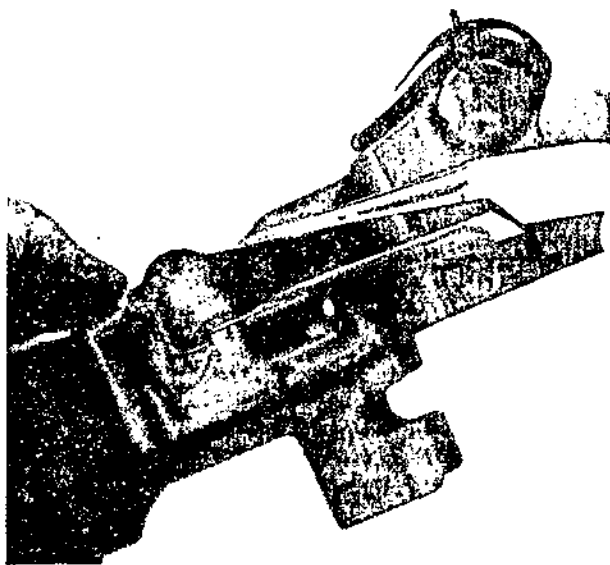

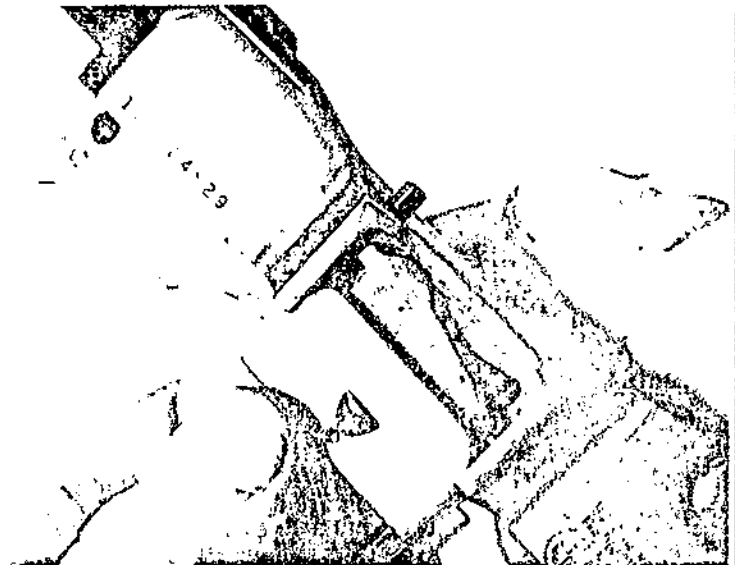

6. Move the bolt forward to the position shown, and remove it upward and toward the right. The bolt must be turned to align the underlug of the firing pin with the exit cut in the bottom of the bolt track.

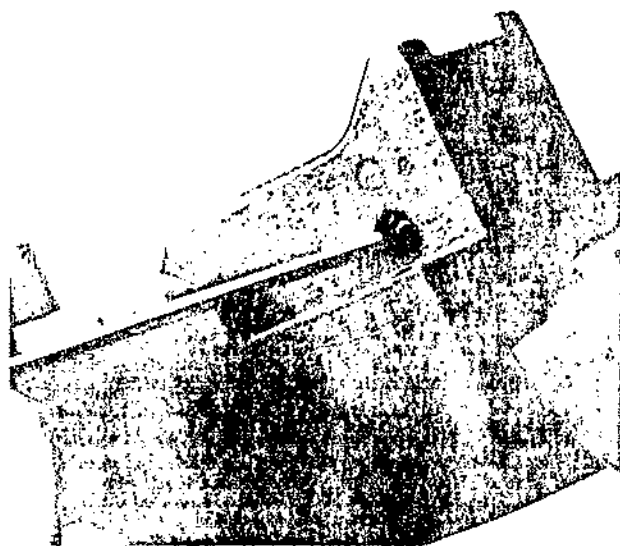

7. In normal takedown, the gas block assembly should not be removed. If it is necessary, use an Allen wrench to remove the four vertical screws, separating the upper and lower sections of the gas block. The gas port bushing will be freed with removal of the lower block, so take care that it isn't lost.

8. Slide the bolt hold-open cover downward out of its slots in the receiver and remove it.

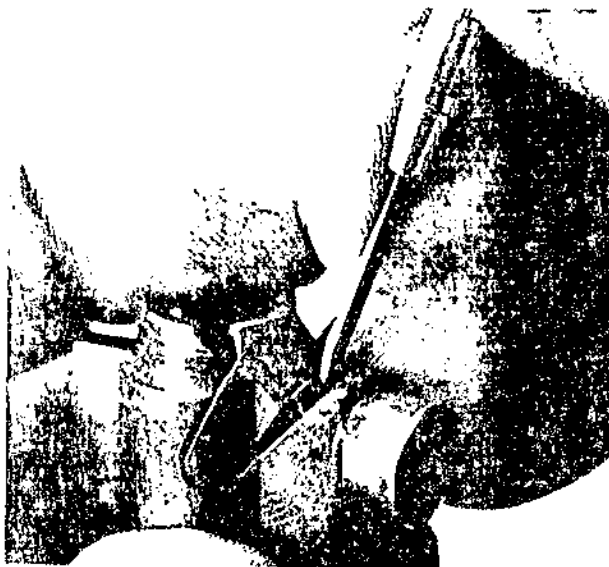

9. Depress the bolt latch plunger on top of the left receiver rail, and lift the bolt lock out of its recess toward the left. **Caution:** The bolt latch retains the plunger, so control the plunger and ease it out upward, along with its spring.

10. The front magazine catch, located in the front of the receiver below the barrel, is retained by a roll cross-pin, accessible through holes on each side. Drift out the cross-pin, and remove the catch toward the front.

- 11.** Insert a small screwdriver beside the extractor plunger, and turn and tip the screwdriver to depress the plunger. Move the extractor upward out of its recess. *Caution: As the extractor post clears the ejector, it will be released, so restrain the ejector and ease it out toward the front. Also, take care to keep the extractor plunger under control, and ease it out.* Removal of the extractor will also free the firing pin to be taken out toward the rear.

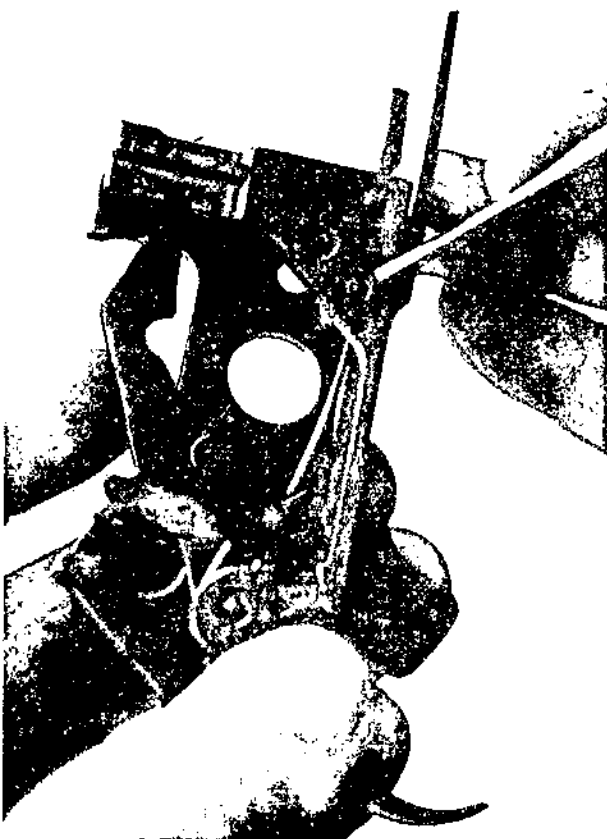

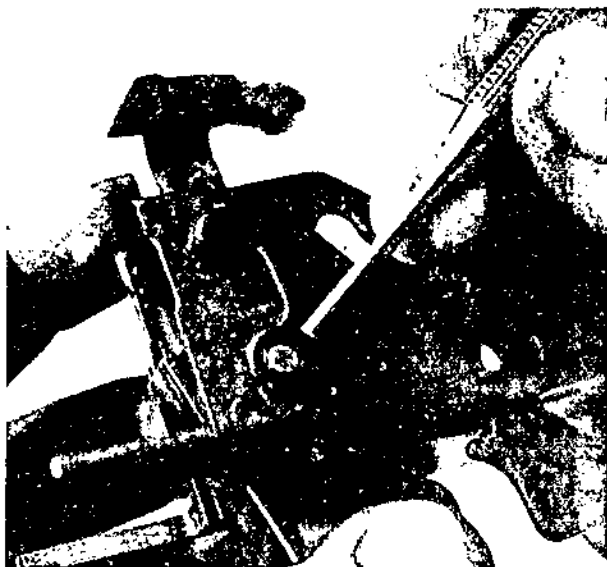

- 12.** Close and latch the trigger guard, and insert a piece of rod or a drift punch through the hole in the rear tip of the hammer spring guide.

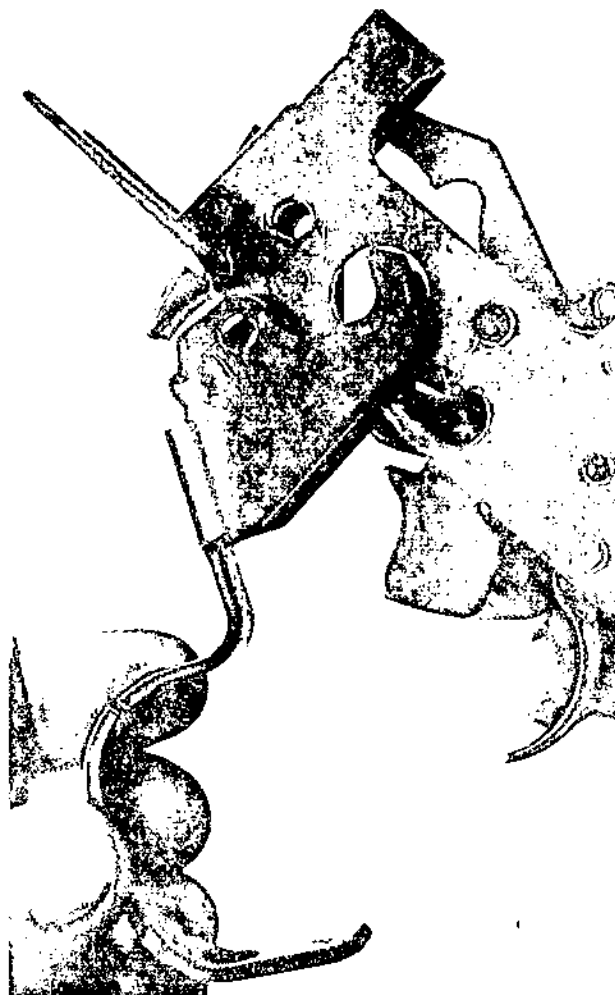

- 13.** Restrain the hammer, move the safety to the off-safe position, and pull the trigger to release the hammer. The rod will trap the hammer spring on the guide. Tip the front of the guide upward, out of its recess at the rear of the hammer, and remove the guide assembly toward the right. If the spring is to be taken off the guide, proceed with care, as the spring is fully compressed.

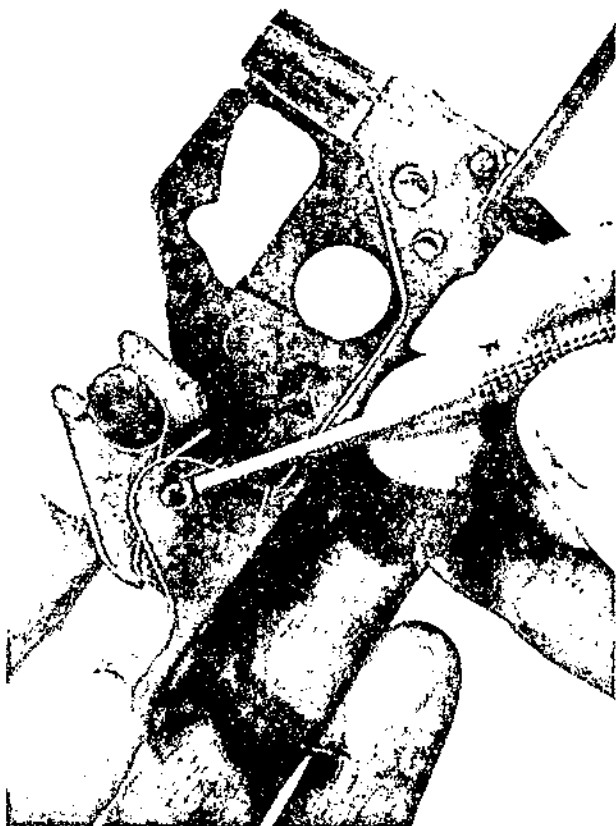

- 14.** Push out the hammer pivot, and remove the hammer upward and toward the right.

- 15.** Move the safety back to the on-safe position, and take off the trigger guard downward and toward the rear.

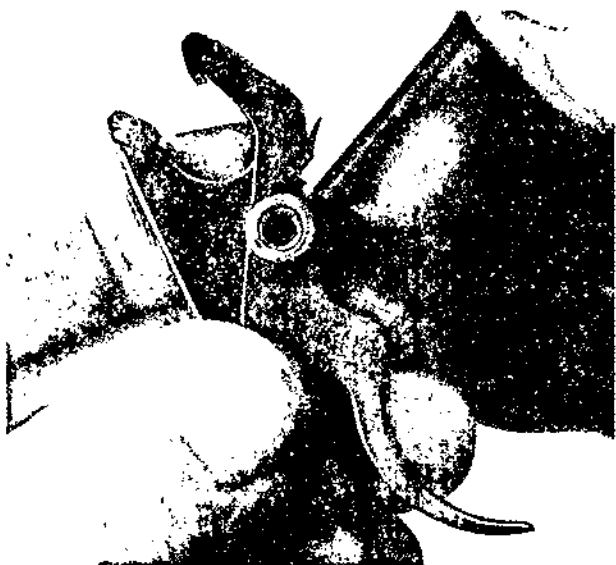

- 16.** Drift out the safety spring pin toward the left, ease the spring tension slowly, and move the spring toward the rear, unhooking it from the safety. Remove the spring toward the right rear.

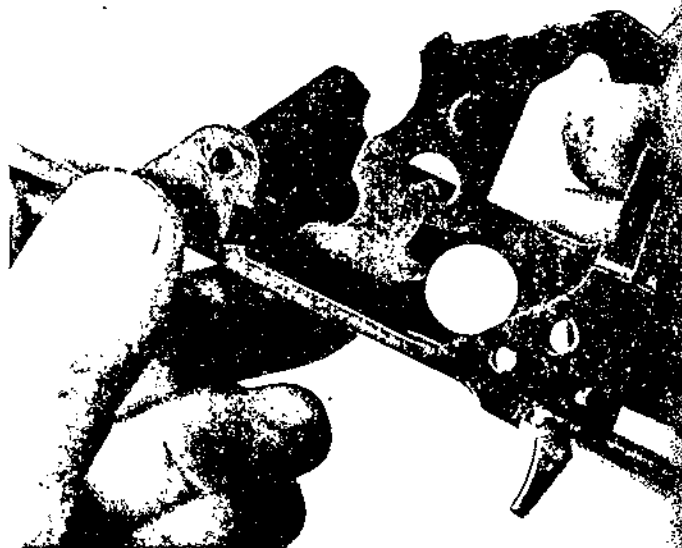

17. Restrain the trigger and sear assembly, and drift out the trigger cross-pin.

18. Remove the trigger and sear assembly upward.

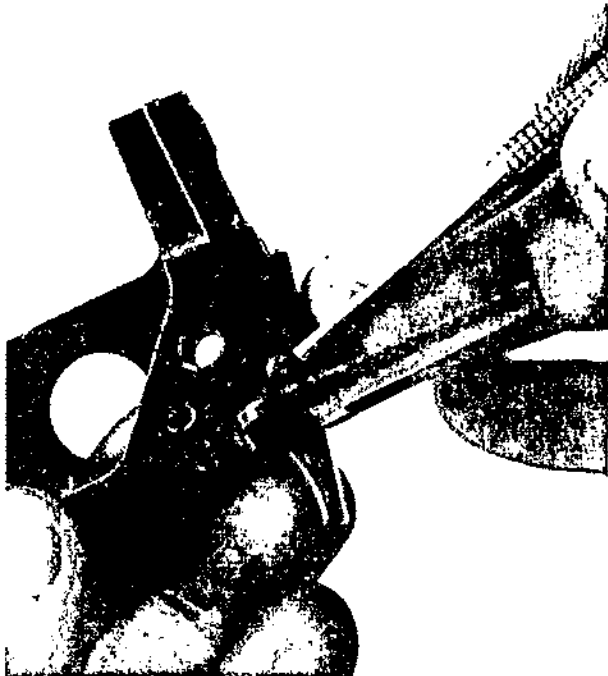

19. The trigger spring is easily detached from the trigger, and the pivot bushing can be drifted out to free the secondary sear and its coil spring from the top of the trigger. *Caution: Use a roll-pin punch to avoid damaging the bushing, and take care to restrain the sear against the tension of its spring.*

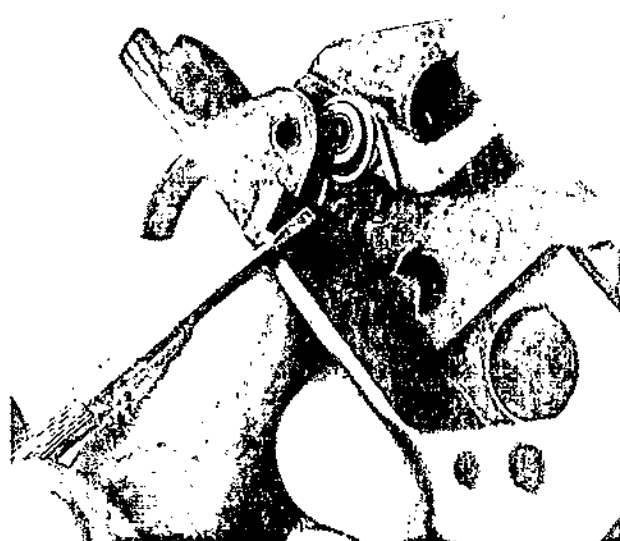

20. Tip the upper portion of the safety catch toward the right, moving its pivot stud out of its hole in the trigger housing, and remove the safety upward.

- 21.** The main magazine catch is retained by a cross-pin at the front of the trigger housing, and the pin must be drifted out toward the left. **Caution:** The strong magazine catch spring will also be released when the pin is removed, so insert a shop cloth into the housing behind the spring to catch it. This spring is rather difficult to re-install, so if removal is not necessary for repair, the catch is best left in place.

Reassembly Tips:

- 1.** When installing the trigger and sear assembly, tilt the assembly forward, and be sure the front hooks of the trigger spring engage the top of the cross-piece in the housing. Push the assembly downward and toward the rear until the cross-pin can be inserted.

When replacing the safety spring, be sure that its front arm goes on the right side of the rear arm of the magazine catch spring. Otherwise, the safety spring pin cannot be fully inserted.

ROBERT C. HANSEN - SUSPECT;
PAULA GOULDING, SHEREN MORROW AND
[REDACTED] VICTIMS;
HOMICIDE

Examination requested by:

Addressee

Reference:

Letters dated 10/10/83, 10/11/83, 11/7/83, 11/14/83
and 12/2/83

Examination requested:

Microscopic Analyses - Firearms - Chemical Analyses

Result of examination:

This report supplements the FBI LABORATORY reports to your office dated December 30, 1983, January 9, 1984, and January 17, 1984. All of the requested examinations have been completed. The listing of the specimens referred to in this report can be found in the report dated December 30, 1983.

The Q17 through Q21 clothing items were visually examined and chemically processed for the presence of bullet holes, gunpowder and gunshot residues, but none were found. However, it is noted that the condition of the Q17 through Q21 specimens was not conclusive to the location of bullet holes and the detection of such residues. These garments were badly deteriorated and covered with dirt and debris.

The evidence pertaining to LABORATORY number 31012085 S UJ PR VI will be returned under separate cover by registered mail.

- Bufile (95-251541)

This examination has been made with the understanding that the evidence is connected with an official investigation of a criminal matter and that the Laboratory report will be used for official purposes only, related to the investigation or a subsequent criminal prosecution. Authorization cannot be granted for the use of the Laboratory report in connection with a civil proceeding.

Result of Examination

This report supplements the FBI LABORATORY reports to your Office dated 12/30/03, 1/9/04 and 1/17/04. All of the requested examinations have been completed. The listing of the specimens referred to in this report can be found in the report dated 12/30/03.

The evidence pertaining to Laboratory number 310120BS S UJ PR VI will be returned under separate cover by registered mail.

b6
b7C

2004 01 01

The Q17 through Q21 clothing items were visually examined and chemically processed for the presence of bullet holes, gunpowder and gunshot residues, but none were found. However, it is noted that the condition of the Q17 through Q21 specimens was not conducive to the location of bullet holes and the detection of such residues. These garments were ~~also~~ badly deteriorated ~~condition~~ and covered with dirt and debris.

Dear Sir:

The evidence being submitted has not been subjected to the same types of technical examination requested. The results of your examination will be used only in the investigation and subsequent prosecution of a criminal matter.

On 10/11/83, evidence seized from the kidnapping/rape victim, [redacted] was sent to your laboratory for purposes of examination. Your letter dated 1/17/84, FBI File number 95-257768 reflects that semen found on (Q1), victim's panties, had the presence of "A" and "H" blood group substances. It was further determined by your laboratory that the K-16 blood sample seized from suspect Robert C. Hansen was grouped as A, PGM 2-1, ESD 1-1, EAP BA, ADA 1-1, AK 1-1, Hp 2-1, Le (a- b+) (secretor).

b6
b7C

I have included with this letter a sample of blood our item #16, seized from victim, [redacted]. Request that your laboratory examine the blood and compare with the results obtained from specimens Q1 semen on panties and specimen K-16 Hansen's blood.

b6
b7C

Trial date reference above case is still set for February 13, 1984. Your assistance in expediting this examination would be greatly appreciated. Please contact me with your results by calling [redacted]

EXAMINATION REQUESTED:

RESIDENCE/CAMPER I83-65851

1. Examine item #1 (I83-65851) for the presence of semen, if there is semen present, identify the blood type. Also, determine whether the person is a secreteer. SM
2. Examine items number 62, 64, 65, 66, and #67 (I83-65851) to determine what the reddish stains are on the carpet. If the stains are blood, determine whether the blood is animal or human. If it is human, we would like to know the blood type. SM
3. Examine item #79 (I83-65851) to determine what the reddish stains are on the curtain. If the stains are blood, determine whether the blood is animal or human. If it is human, we would like to know the blood type. SM
4. Examine items number 1, 2, 7, 9, 10, 13, 14, 15, 16, 17, 20, 27, 29, 49, 51, 59, 79, 81, 82 and #83 for the presence of foreign hairs and fibers. If there are foreign hairs and fibers, compare these items to the findings (of hairs and fibers) on our cases I82-12261 (SHERRY MORROW); I83-65755 (PAULA GOULDING); and [REDACTED] MAA

ADDENDUM

We have been advised by the District Attorney's Office that they want to prosecute our case [redacted] previous to pursuing the two homicide cases I82-12261 (SHERRY MORROW) and I83-65755 (PAULA GOULDING). Therefore, we would appreciate your efforts being concentrated on the following items first. The [redacted] Case was only involved with the residence and the Buick.

b6
b7c

EVIDENCE SUBMITTED:

ITEMS FROM HANSEN'S RESIDENCE

I83-65851

- AST # 1 Black bear rug taken from family room.
- AST # 2 Control carpet sample taken from southeast upstairs bedroom.
- AST #20 Disguise kit taken from concealed storage in bottom shelf of family room.
- AST #27 Brown and yellow afghan from downstairs sofa.
- AST #45 Hairs and fibers from the east side of the family room rug.
- AST #47 Hairs and fibers from family room furniture.
- AST #48 Hairs and fibers from beneath the furniture in family room.
- AST #49 Vacuumings from the family room rug.
- AST #50 Lint and hair from paper bag located on a pile of magazines.
- AST #51 Contents of downstairs bathroom sink from the trap.
- AST #59 Two (2) wigs taken from a box located under the workbench in the garage.
- AST #60 Hair samples taken from "Gum Drop" the family house dog.
- AST #61 Fabric samples taken from all basement furniture.
- AST #62 Sample #5 of stain on basement carpet.
- AST #63 Carpet samples from northwest corner of family room.
- AST #64 Sample #3 of stain from family room carpet.
- AST #65 Sample #4 of stain from family room carpet.
- AST #66 Sample #2 of stain from family room carpet.
- AST #67 Sample #1 of stain from family room carpet.
- AST #73 Hair samples from black Labrador dog.

and 12/2/83

Examination requested:

Microscopic Analyses - Firearms - Chemical Analyses

Result of examination:

This report supplements the FBI Laboratory report to your office dated December 30, 1983. A complete listing of the specimens can be found in that report.

Paula Goulding

No hairs microscopically like those found in the K1 and K2 specimens were found on or in specimens Q340 through Q410 (31117062 S UJ VI).

Sherry Morrow

No hairs microscopically like those found in the K11 and K14 specimens (31110055 S UJ VI) were found on the glass microscope slides containing hairs previously removed from specimens Q7 through Q24 (30107056 S PR VB VI). It is noted that the degraded condition of the known hairs from the victim precludes meaningful comparisons with hairs removed from suspect items.

Letter dated October 5, 1983

Examination requested:

Firearms - Fingerprint

Specimen:

Q1 Cartridge case (Item #5)

Result of examination:

Specimen Q1 is a .223 Remington caliber cartridge case which was identified as having been fired in the K9 .223 Remington caliber (5.56mm) Ruger "Mini-14" rifle, Serial Number (Laboratory No. 31101065 S PR), which was reportedly found in the residence of ROBERT C. HANSEN. This rifle was also identified as having fired the previously submitted Q4 cartridge case recovered near the body of SHERRY MORROW, which was described in Laboratory report 20927107S PR, dated November 15, 1982.

b6
b7C

Specimen Q1 bears a "LC 76" headstamp which indicates that it was originally manufactured under Government contract by the Lake City Ordnance Plant. This cartridge case has been reloaded.

RE: A.S.T. Case Number: 183-65755
VICTIM: PAULA GOULDING (CRICK), W/F,
DOB: 6/4/51

Dear Sir:

The evidence being submitted has not been subjected to the same type of technical examination, nor will it be subjected to the same types of technical examination requested. The results of your examination will be used only in the investigation and subsequent prosecution of a criminal matter.

On September 2, 1983, the body of a young female was discovered in a shallow grave on the north banks of the Knik River, approximately 25 miles north of Anchorage, Alaska. The body has been identified as that of Paula Goulding, who disappeared from Anchorage on 4/24/83. Autopsy revealed that she had been shot through the sternum with a small caliber projectile. A cartridge casing was found near the body. The gravesite is approximately 2 miles from the gravesite of previously discovered homicide victim, Sherry Morrow. There appear to be several similarities between the two homicides.

Evidence has been previously submitted to the F.B.I. in the Sherry Morrow case (AST Case Number: 182-12261; FBI file #95-251541, F.B.I. Lab #20927107SPR), including a cartridge casing.

EVIDENCE SUBMITTED:

Item #5. Shell casing found near grave.

EXAMINATION REQUESTED:

1. Examine item #5 for latent prints and identify item #5.
2. Compare item #5 with item #1 (182-12261) to determine if both cartridges were fired from the same firearm.

Specimens received December 8, 1983, under cover of letter dated December 2, 1983 (31208046 S UJ):

K3

b6
b7C

K4

Result of examination:

No head hairs or pubic hairs dissimilar to those found in specimens K3 and K4 were found on or in specimens Q1 through Q7 (31014063). No hairs microscopically like those found in the F3 and K4 specimens were found on or in specimens Q340 through Q344, Q344A, Q345 through Q368, Q368A through Q368E and Q369 through Q383 (31117062).

No apparent interchange of textile fibers was detected between items submitted from the suspect/scene and from the victim [redacted]. No animal hairs of value for meaningful comparison purposes were found on or in specimens Q1 through Q7.

b6
b7c

The following results were obtained from the examination of evidence submitted in Laboratory #31012085 S UJ PR VI:

Dark brown head hairs microscopically dissimilar to hairs found in the K2 specimen were found in the Q22 specimen. These hairs are suitable for future comparison purposes and have been mounted on a glass microscope slide. These hairs differ microscopically to hairs found in the K14 specimen (HANSFII). No other hairs dissimilar to those found in specimens K1 and K2 were found on or in specimens Q2 through Q23.

The metal button comprising specimen Q12 is the same brand as the Q17 jeans (missing waist button) and, accordingly, could have originated from these jeans.

The cause of damage to specimen Q19 could not be determined. The Q20 brassiere appears to have been cut.

Because of the condition of clothing items submitted, no fiber exams were conducted.

Other Laboratory examinations are in progress and you will be subsequently advised of their results and of the disposition of the submitted items.

Result of Examination

No head hairs or pubic hairs dissimilar to those found in specimens K₃ and K₄ were found on or in specimens Q₁-Q₇. No hairs microscopically like those found in the K₃ and K₄ specimens were found on or in specimens Q₃₄₀ - Q₃₄₄, Q₃₄₅, Q₃₄₅ - Q₃₆₈, Q₃₆₈ A - Q₃₆₈ B and Q₃₆₉ - Q₃₈₃.

No apparent interchange of textile fibers was detected between items submitted from the suspect / scene and from the victim. No animal hairs of value for meaningful comparison purposes were found on ~~the~~ or in specimens Q₁-Q₇. The following results were obtained from the examination of evidence submitted in laboratory # 31012085 S UJ PR VI:

Dark brown head hairs microscopically dissimilar to hairs found in the K₂ specimen were found in the Q₂₂ specimen. These hairs are suitable for future comparison purposes and have been mounted on a glass microscope slide. These hairs differ microscopically to hairs found in the K₁₄ specimen. No other hairs dissimilar to those found in specimens K₁ and K₂ were found on or in specimens Q₂ - Q₂₃.

The metal button comprising specimen Q₁₂ is ~~the same brand as the jeans~~ ^{Q₁₂ (missing waist button)} ~~comprising specimen Q₁₉~~ and, accordingly, would have originated from these jeans. The cause of damage to specimen Q₁₉ could not be determined. The Q₂₀ brassiere appears to have been cut.

Because of the condition of clothing items submitted, no fiber exams were conducted.

Other Laboratory examinations are in progress and you will be subsequently advised of their results and of the disposition of the submitted items.

Dear Sir:

310120555

The evidence being submitted has not been subjected to the same type of technical examination, nor will it be subjected to the same types of technical examination requested. The results of your examination will be used only in the investigation and subsequent prosecution of a criminal matter.

On 9/12/82, the body of Sherry Morrow, a dancer at the Wild Cherry, a bar featuring nude female dancers, was found in a shallow grave approximately twenty-five miles from Anchorage. The gravesite was located in a glacial river gravel sandbar flood plain, an area accessible by motor vehicle, boat and light aircraft. The victim appeared to have been dressed at the time of her death with an Ace bandage wrapped around her face from the forehead to just under the nose. During the autopsy, a projectile was located in the victim's upper chest. Sherry Morrow's

page -2-

clothing was shipped to your laboratory for examination reference our case #I82-12261.

On 9/2/83, the body of Paula Goulding, a dancer at the Bush Company, a bar featuring nude female dancing, was found in a shallow grave in a sandbar of the Knik River, approximately one mile from the body of Sherry Morrow. Paula Goulding appears to have been dressed, or partially dressed when buried in the shallow grave. Like Sherry Morrow, animal predation has scattered some of the victim's clothing and bones about. Both victims appear to have died as a result of gunshot wound(s) to the chest. The body of Paula Goulding was found in an area generally only accessible by light aircraft or river boat. Paula Goulding's clothing, was removed from the gravesite and shipped to your laboratory for examination reference our case number I83-65755.

Both Goulding and Morrow disappeared after allegedly meeting some unknown person for a date. As of this date we have approximately eleven missing dancers and/or prostitutes having disappeared under similar circumstances.

[REDACTED] the Anchorage Police Department investigated a reported

Hansen's residence. Hansen was subsequently interviewed and consented to the search of his plane, vehicle and residence. The exterior and interior of Hansen's residence matched the detailed description given by the victim [REDACTED] however, the police did not find [REDACTED]

[REDACTED] Several weapons, handguns and rifles were found hidden in a wall; however, [REDACTED]

[REDACTED] An Ace bandage and rifle ammunition were observed in Hansen's vehicle; however, they were not seized. It should be further noted that, Hansen was able to produce an alibi witness who related to the police that Hansen was at his residence during the time period that [REDACTED]

b6
b7c
b7d

[REDACTED] No charges were filed and the case was closed.

Our department has since relocated and re-interviewed [REDACTED] due to the similarities noted in [REDACTED] case and the cases involving Goulding and Morrow. The evidence relating to [REDACTED] case was recently turned over to our department by the Anchorage Police Department. We have reason to believe that Hansen is not only responsible for [REDACTED] kidnapping but also the kidnapping and murder of Sherry Morrow and Paula Goulding. We are thus submitting for examination and comparison the evidence seized reference the [REDACTED] case. Your examinations will hopefully provide us with additional information linking all three cases by finding similarities in hairs and fibers found in the victim's clothing.

VICTIM: PAULA GOULDING

SUSPECT: Unknown

Dear Sir:

The evidence being submitted has not been subjected to the same type of technical examination, nor will it be subjected to the same types of technical examination requested. The results of your examination will be used only in the investigation and subsequent prosecution of a criminal matter.

On September 2, 1983, the body of a young female was discovered in a shallow grave on the north bank of the Knik River, approximately 25 miles north of Anchorage, Alaska. The body has been identified as that of Paula Goulding, who disappeared from Anchorage on 4/24/83. Autopsy revealed that she had been shot through the sternum with a small caliber projectile. A cartridge casing was found near the body. The gravesite is approximately 2 miles from the gravesite of a previously discovered homicide victim Sherry Morrow. There appears to be several similarities between the two homicides.

Evidence has been previously submitted to the FBI on this case, (reference our letter of October 5, 1983) in the form of a cartridge casing.

EVIDENCE SUBMITTED:

Item #1 Blue denim cloth from gravesite.

Item #2 Blue denim cloth from gravesite.

Item #4 Half a bra from gravesite.

Item #7 Blue denim cloth from gravesite.

- Item ~~#25~~ Metal button, recovered during subsequent sifting of grave on 9/17/83
- Item ~~#28~~ Pubic combings taken from Paula Goulding
- Item ~~#29~~ Boots from victim at autopsy.
- Item ~~#30~~ Pants from victim at autopsy.
- Item ~~#31~~ Jacket from victim at autopsy.
- Item ~~#32~~ Sweater from victim at autopsy.
- Item ~~#33~~ Half of a bra from victim at autopsy.
- Item ~~#34~~ Panties from victim at autopsy.
- Item #35 Debris from drying area.

EXAMINATION REQUESTED:

Examine and compare AST Item numbers 1, 2, 4, 7, 8, 9, 13, 19, 24, 29, 30, 31, 32, 33, 34 and #35 for the presence of foreign fibers and hairs.

Examine AST Item numbers, 10, 14, 23, and #28 for the presence of foreign hair and fibers. Compare AST Item numbers 10, 14, 23 and #28 with AST Item numbers 21 and 22 to determine origin.

FBI Letter
Our Case I83-65755
October 10, 1983

page 3

EXAMINATION REQUESTED: (con't)

Compare AST Item #25 with AST Item numbers 29 and 30 to determine origin.

Examine AST Item numbers 30, 31, 32, 33 and #34 for the presence of bullet holes, gunpowder residue or semen residue.

Examine AST Item numbers 32 and 33 to determine if the separations in the cloth resulted from cutting or from tearing.

Compare any foreign hairs or fibers found in evidence submitted in AST case number I83-65755 with any foreign hairs or fibers found in previously submitted AST case number I82-12261 (Sherry Morrow).

All foreign hairs and fibers from these two cases will be compared to AST [redacted] which will be submitted to you in the near future.

b6
b7C

Please feel free to perform any other examinations which you believe will be helpful in this case.

At the completion of your examinations, please retain this evidence for comparison to evidence which will be submitted in the future.

We thank you for your assistance in this matter. Please be assured of our cooperation in all matters of mutual concern.

Sincerely,

[redacted]

Major Crime Unit
Criminal Investigation Bureau

and 12/2/83

Examination requested:

Microscopic Analyses - Firearms - Chemical Analyses

Result of examination:

This report supplements the FBI Laboratory reports to your office dated December 30, 1983, and January 9, 1984. A listing of the specimens can be found in the December 30, 1983 report.

The K16 blood sample (31110055 S UJ VI) was grouped as "A, PGM 2-1, EsD 1-1, EAP BA, ADA 1-1, AK 1-1, Hp 2-1, Le(a-b+)(secretor)."

Semen containing spermatozoa, male reproductive cells, was identified on specimens Q1 (31014063 S UJ VI) and Q350 (31117062 S UJ VI). Grouping tests conducted on the semen stains identified on specimens Q1 and Q350 disclosed the presence of the "A" and "H" blood group substances. No semen was found on specimens Q2 through Q4, Q6 through Q8, Q340 through Q342, Q344, Q345, Q347 through Q349, Q351, Q353, Q363 through Q365, Q370,

- Bufile (95-251541)
Page 1

This examination has been made with the understanding that the evidence is connected with an official investigation of a criminal matter and that the Laboratory report will be used for official purposes only, related to the investigation or a subsequent criminal prosecution. Authorization cannot be granted for the use of the Laboratory report in connection with a civil proceeding.

Dear Sir:

310120855 VB

The evidence being submitted has not been subjected to the same type of technical examination, nor will it be subjected to the same types of technical examination requested. The results of your examination will be used only in the investigation and subsequent prosecution of a criminal matter.

On 9/12/82, the body of Sherry Morrow, a dancer at the Wild Cherry, a bar featuring nude female dancers, was found in a shallow grave approximately twenty-five miles from Anchorage. The gravesite was located in a glacial river gravel sandbar flood plain, an area accessible by motor vehicle, boat and light aircraft. The victim appeared to have been dressed at the time of her death with an Ace bandage wrapped around her face from the forehead to just under the nose. During the autopsy, a projectile was located in the victim's upper chest. Sherry Morrow's

clothing was shipped to your laboratory for examination reference our case #182-12261.

On 9/2/83, the body of Paula Goulding, a dancer at the Bush Company, a bar featuring nude female dancing, was found in a shallow grave in a sandbar of the Knik River, approximately one mile from the body of Sherry Morrow. Paula Goulding appears to have been dressed, or partially dressed when buried in the shallow grave. Like Sherry Morrow, animal predation has scattered some of the victim's clothing and bones about. Both victims appear to have died as a result of gunshot wound(s) to the chest. The body of Paula Goulding was found in an area generally only accessible by light aircraft or river boat. Paula Goulding's clothing, was removed from the gravesite and shipped to your laboratory for examination reference our case number 183-65755.

Both Goulding and Morrow disappeared after allegedly meeting some unknown person for a date. As of this date we have approximately eleven missing dancers and/or prostitutes having disappeared under similar circumstances.

[REDACTED] the Anchorage Police Department investigated a reported

page -3-

Hansen's residence. Hansen was subsequently interviewed and consented to the search of his plane, vehicle and residence. The exterior and interior of Hansen's residence matched the detailed description given by the victim [REDACTED] however, the police did not find [REDACTED]

[REDACTED] Several weapons, handguns and rifles were found hidden in a wall; however, [REDACTED]

[REDACTED] An Ace bandage and rifle ammunition were observed in Hansen's vehicle; however, they were not seized. It should be further noted that, Hansen was able to produce an alibi witness who related to the police that Hansen was at his residence during the time period that [REDACTED] allegedly with Hansen in Hansen's residence. [REDACTED]

b6
b7C
b7D

[REDACTED] No charges were filed and the case was closed.

Our department has since relocated and re-interviewed [REDACTED] due to the similarities noted in [REDACTED] case and the cases involving Goulding and Morrow. The evidence relating to [REDACTED] case was recently turned over to our department by the Anchorage Police Department. We have reason to believe that Hansen is not only responsible for [REDACTED] kidnapping but also the kidnapping and murder of Sherry Morrow and Paula Goulding. We are thus submitting for examination and comparison the evidence seized reference the [REDACTED] case. Your examinations will hopefully provide us with additional information linking all three cases by finding similarities in hairs and fibers found in the victim's clothing.

Homicide

VICTIM: PAULA GOULDING

SUSPECT: unknown

// Sherry Morrow Homicide

b6
b7c

Dear Sir:

The evidence being submitted has not been subjected to the same type of technical examination, nor will it be subjected to the same types of technical examination requested. The results of your examination will be used only in the investigation and subsequent prosecution of a criminal matter.

On September 2, 1983, the body of a young female was discovered in a shallow grave on the north bank of the Knik River, approximately 25 miles north of Anchorage, Alaska. The body has been identified as that of Paula Goulding, who disappeared from Anchorage on 4/24/83. Autopsy revealed that she had been shot through the sternum with a small caliber projectile. A cartridge casing was found near the body. The gravesite is approximately 2 miles from the gravesite of a previously discovered homicide victim Sherry Morrow. There appears to be several similarities between the two homicides.

Evidence has been previously submitted to the FBI on this case, (reference our letter of October 5, 1983) in the form of a cartridge casing.

EVIDENCE SUBMITTED:

- Item #1 Blue denim cloth from gravesite.
- Item #2 Blue denim cloth from gravesite.
- Item #4 Half a bra from gravesite.
- Item #7 Blue denim cloth from gravesite.

- Item ~~#19~~ Blue denim cloth.
- Item ~~#21~~ Hair, known pubic hair taken at autopsy.
- Item #22 Hair, known head hairs taken at autopsy.
- Item ~~#23~~ Hair, recovered during subsequent sifting of grave on 9/17/83.
- Item ~~#24~~ Cloth, recovered during subsequent sifting of grave on 9/17/83.
- Item ~~#25~~ Metal button, recovered during subsequent sifting of grave on 9/17/83.
- Item ~~#28~~ Pubic combings taken from Paula Goulding
- Item ~~#29~~ Boots from victim at autopsy.
- Item ~~#30~~ Pants from victim at autopsy.
- Item ~~#31~~ Jacket from victim at autopsy.
- Item ~~#32~~ Sweater from victim at autopsy.
- Item ~~#33~~ Half of a bra from victim at autopsy.
- Item ~~#34~~ Panties from victim at autopsy.
- Item #35 Debris from drying area.

EXAMINATION REQUESTED:

Examine and compare AST Item numbers 1, 2, 4, 7, 8, 9, 13, 19, 24, 29, 30, 31, 32, 33, 34 and #35 for the presence of foreign fibers and hairs.

Examine AST Item numbers, 10, 14, 23, and #28 for the presence of foreign hair and fibers. Compare AST Item numbers 10, 14, 23 and #28 with AST Item numbers 21 and 22 to determine origin.

FBI Letter
Our Case I83-65755
October 10, 1983

page 3

EXAMINATION REQUESTED: (con't)

Compare AST Item #25 with AST Item numbers 29 and 30 to determine origin.

Examine AST Item numbers 30, 31, 32, 33 and #34 for the presence of bullet holes, gunpowder residue or semen residue.

Examine AST Item numbers 32 and 33 to determine if the separations in the cloth resulted from cutting or from tearing.

Compare any foreign hairs or fibers found in evidence submitted in AST case number I83-65755 with any foreign hairs or fibers found in previously submitted AST case number I82-12261 (Sherry Morrow).

All foreign hairs and fibers from these two cases will be compared to AST [redacted] which will be submitted to you in the near future.

b6
b7C

Please feel free to perform any other examinations which you believe will be helpful in this case.

At the completion of your examinations, please retain this evidence for comparison to evidence which will be submitted in the future.

We thank you for your assistance in this matter. Please be assured of our cooperation in all matters of mutual concern.

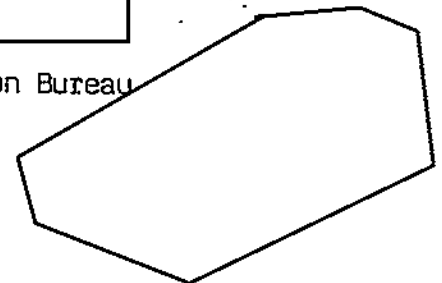

Sincerely,

[redacted]

b7c

Dear Sir:

The evidence being submitted has not been subjected to the same type of technical examination, nor will it be subjected to the same types of technical examination requested. The results of your examination will be used only in the investigation and subsequent prosecution of a criminal matter.

On September 2, 1983, the body of a young female was discovered in a shallow grave on the north banks of the Knik River, approximately 25 miles north of Anchorage, Alaska. The body has been identified as that of Paula Goulding, who disappeared from Anchorage on 4/24/83. Autopsy revealed that she had been shot through the sternum with a small caliber projectile. A cartridge casing was found near the body. The gravesite is approximately 2 miles from the gravesite of previously discovered homicide victim, Sherry Morrow. There appear to be several similarities between the two homicides.

Evidence has been previously submitted to the F.B.I. in the Sherry Morrow case (AST Case Number: 182-12261; FBI file #95-251541, F.B.I. Lab #20927107SPR), including a cartridge casing.

EVIDENCE SUBMITTED:

Item #5. Shell casing found near grave.

EXAMINATION REQUESTED:

1. Examine item #5 for latent prints and identify item #5.
2. Compare item #5 with item #1 (182-12261) to determine if both cartridges were fired from the same firearm.

Dear Sir:

The evidence being herewith transmitted has not, nor will be subjected to the same type of technical examination requested. The results of your examination will be solely for the investigation and subsequent prosecution of a criminal matter.

Evidence concerning this matter, as well as a synopsis has been submitted previously.

Pursuant to our telephone conversation with the above Agent, the following evidence concerning firearms examination is requested.

Items #1 (182-12261) and #5 (183-65755) are presently with the F.B.I. Laboratory, file #95-251541; and three items are being sent by Federal Express to the F.B.I. Laboratory, our case 183-65851.

2 OCT 13 1983

On 9/12/82, the body of Sherry Morrow, a dancer at the Wild Cherry, a bar featuring nude, female dancers, was found in a shallow grave approximately twenty-five miles from Anchorage. The gravesite was located in a glacial river gravel sandbar flood plain, an area accessible by motor vehicle, boat and light aircraft. The victim appeared to have been dressed at the time of her death with an Ace bandage wrapped around her face from the forehead to just under the nose. During the autopsy, a projectile was located in the victim's upper chest. Sherry Morrow's

clothing was shipped to your laboratory for examination reference our case #I82-12261.

On 9/2/83, the body of Paula Goulding, a dancer at the Bush Company, a bar featuring nude female dancing, was found in a shallow grave in a sandbar of the Knik River, approximately one mile from the body of Sherry Morrow. Paula Goulding appears to have been dressed, or partially dressed when buried in the shallow grave. Like Sherry Morrow, animal predation has scattered some of the victim's clothing and bones about. Both victims appear to have died as a result of gunshot wound(s) to the chest. The body of Paula Goulding was found in an area generally only accessible by light aircraft or river boat. Paula Goulding's clothing, was removed from the gravesite and shipped to your laboratory for examination reference our case number I83-65755.

Both Goulding and Morrow disappeared after allegedly meeting some unknown person for a date. As of this date we have approximately eleven missing dancers and/or prostitutes having disappeared under similar circumstances.

[REDACTED] the Anchorage Police Department investigated a reported

page -3-

Hansen's residence. Hansen was subsequently interviewed and consented to the search of his plane, vehicle and residence. The exterior and interior of Hansen's residence matched the detailed description given by the victim [REDACTED] however, the police did not find [REDACTED]

[REDACTED] Several weapons, handguns and rifles were found hidden in a wall; however, [REDACTED]

[REDACTED] An Ace bandage and rifle ammunition were observed in Hansen's vehicle; however, they were not seized. It should be further noted that, Hansen was able to produce an alibi witness who related to the police that Hansen was at his residence during the time period that [REDACTED] was allegedly with Hansen in Hansen's residence. [REDACTED]

b6
b7C
b7D

[REDACTED]. No charges were filed and the case was closed.

Our department has since relocated and re-interviewed [REDACTED] due to the similarities noted in [REDACTED] case and the cases involving Goulding and Morrow. The evidence relating to [REDACTED] case was recently turned over to our department by the Anchorage Police Department. We have reason to believe that Hansen is not only responsible for [REDACTED] kidnapping but also the kidnapping and murder of Sherry Morrow and Paula Goulding. We are thus submitting for examination and comparison the evidence seized reference the [REDACTED] case. Your examinations will hopefully provide us with additional information linking all three cases by finding similarities in hairs and fibers found in the victim's clothing.

Attention: FBI Laboratory REF: Robert C. Hansen, Suspect
Burglary, Malicious Destruction
of Property, Monsoon Lake

Dear Sir:

Sometime during late 1980 or early 1981 someone went to a cabin on Monsoon Lake, the property of [redacted] broke into the cabin, stole various items, and shot numerous holes in the cabin and other items in the area. One brass .223 cartridge was recovered from the scene.

In October of 1983, the residence of Robert C. Hansen was searched in reference to a homicide investigation. During the search, many items were recovered from similar cabin burglaries. A .223 Ruger Mini-14 and a 7mm CTU Thompson were recovered from the residence. These were seized pursuant to a search warrant.

I am sending by registered mail a package containing the following evidence in this case:

- 1.. One .223 cartridge obtained from the scene.

It would be appreciated if you could compare this with our case number I83-65851, which you currently have in your possession, item numbers 105 - a 7mm CTU Thompson pistol, and 106 - a Ruger Mini-14 .223 rifle.

This evidence, which should be returned to us, has not been examined by any other expert.

Very Truly Yours,

Major Crime Unit
Criminal Investigation Bureau

Examination requested by:

Addressee

Reference:

Letter dated December 23, 1983

Examination requested:

Firearms

Specimen:

Q1 Cartridge case (#1)

Result of examination:

Specimen Q1 is a .223 Remington caliber cartridge case which bears an "LC 71" headstamp which indicates it was originally manufactured under Government contract by the Lake City Ordnance Plant. This cartridge case has been reloaded.

The Q1 cartridge case bears microscopic marks of value for identification purposes. However, these microscopic marks were found to be different from those present on test-fired cartridge cases obtained from the K9 .223 Remington caliber (5.56mm) Ruger "Mini-14" rifle, Serial Number 180-67636 (Laboratory No. 31101065 S PR), which was reportedly found in the residence of ROBERT C. HANSEN. Therefore, nothing was found to indicate that the Q1 cartridge case was fired in the K9 rifle or the K10 7mm Thompson Center Arms "Contender" pistol, Serial Number 198462.

Specimen Q1 is being returned to your office as an enclosure to this report.

Enclosure

This examination has been made with the understanding that the evidence is connected with an official investigation of a criminal matter and that the Laboratory report will be used for official purposes only, related to the investigation or a subsequent criminal prosecution. Authorization cannot be granted for the use of the Laboratory report in connection with a civil proceeding.

Mr. James H. Geer
Assistant Director
Federal Bureau of Investigation Laboratory
Washington, D.C. 20537

Dear Mr. Geer:

The Alaska State Troopers recently concluded a successful investigation which resulted in a plea of guilty and sentencing to 451 years plus life in prison of one Robert C. Hansen, who admitted to the murder of 17 young prostitutes and club dancers from the Anchorage area.

This was a somewhat complex and involved investigation in which the crimes of kidnapping and sexual assault were initially charged with obvious murder charges forthcoming as a result of the F.B.I. Lab conclusions. Our success was in no small way a result of the expeditious completion of examinations and comparison of evidence on the part of [redacted], Serology; [redacted] Firearms; and [redacted] of Hairs and Fibers. All three of them materially contributed to the Alaska State Troopers investigation.

Please convey to them my personal thanks and appreciation for a job well done.

Sincerely,

Michael C. Kolivosky
Colonel Michael C. Kolivosky
