TDR2 (Historical)
4g IP Session Log with Cell Site Locations

Start Date/Time	Stop Date/Time	MSISDN	Orig Total MB	ECGI	ECGI eNodeB ID	ECGI Market ID	Market eNodeB #	Served PDP PDN	SID	NID	Cell ID	Charging ID	Record Close Cause
Start date and time of the session	Stop date and time of the session	Mobile number associated with the device (phone, PDA, PC card, mobile modem).	Total Megbytes of usage for session	Location identifier in hexidecimal format	Used to identify which switch and cell site the target utilized during the transaction when the device is using the 4G network	Used to identify which LTE market ID number (switch) the target utilized during the transaction when the device is using the 4G network	Used to identify which cell site number the target utilized during the transaction when the device is using the 4G network	IP used to connect to session in either IP or IPV6 format	Used to identify which switch and tower the target utilized during the transaction when the device is using the 3G network.			Access Node Charging Identifier (ANCID). This field holds the Charging ID for this PDN Session, which constitutes a unique identifier	The reason for the session closure.

PLEASE NOTE:

Call Start and Event Stop times are a reflection of the local time where the device is located

Note: Sessions with a "Record Close Cause" other than "Normal Release" or "Abnormal Release" could potentially carry over to a new session and use the eNodeB from the previous session as a placeholder.
In those cases, the new carryover session will have the same "Charging ID" information, but the eNodeB listed could potentially not be reflective of the correct location information.
All carryover sessions will also start at the exact hour:minute:second of the end of the previous session that ended with a cause other than Normal Release or Abnormal Release.
